Control of Nonconforming Product

Document no.	QM-NCR-001	**Revision**	B
Document type	Quality Procedure	**Status**	Current
Effective date	2025-06-01	**Owner**	Quality Management
Classification	Internal		

1 Purpose

This procedure makes sure that nonconforming product is identified, segregated and not used or delivered by mistake.

2 Identification and segregation

Whoever finds a nonconforming part must:

1 Attach a red tag with date, part number, quantity and a short description of the defect.

2 Put the part in the red box at the workstation or in quarantine cage Q1.

3 Inform the shift leader.

3 Nonconformity report (NCR)

The shift leader or quality creates an NCR in the quality system within the same shift. The NCR contains part number, serial or batch numbers, defect description, photo and quantity.

4 Decision

Only quality may decide on the disposition of nonconforming product:

Disposition	Who decides
Rework according to an approved rework instruction	quality
Use as is (concession)	quality and engineering, customer approval if the part is delivered
Scrap	quality
Return to supplier	quality with purchasing

5 Escalation

If the same defect occurs 3 times within one week or the defect can affect safety or the customer, quality starts an 8D problem solving process.

6 Revision history

Rev	Date	Change
