Incoming Inspection Plan for Purchased Parts

Document no.	QP-INS-007	**Revision**	C
Document type	Quality Procedure	**Status**	Current
Effective date	2026-02-01	**Owner**	Quality Engineering
Classification	Internal		

1 Purpose

This procedure defines how purchased parts are inspected at goods receipt and how the inspection effort is adjusted to the supplier performance.

2 Inspection levels

Level	When	Sample
Normal	default	sampling plan ISO 2859-1, level II, AQL 0.65
Tightened	after a rejected lot or supplier rated C	sampling plan level II, AQL 0.4
Reduced	10 lots in a row accepted and supplier rated A	sampling plan level I, AQL 0.65
Skip lot	20 lots in a row accepted, supplier rated A, safety parts excluded	every 5th lot

Safety-relevant parts (marked with the S symbol in the drawing) are never on skip lot.

3 First article inspection

For every new part or after a change at the supplier, a first article inspection (FAI) with full dimensional report and material certificate 3.1 is required before the first series delivery.

4 Rejected lots

A rejected lot is labelled with a red label and moved to quarantine cage Q1. A nonconformity report is created according to QM-NCR-001 and the supplier is informed within 24 hours.

5 Supplier rating

Suppliers are rated every quarter on quality (ppm), delivery and reaction to complaints. A: 90 points or more, B: 75 to 89 points, C: below 75 points.

6 Revision history

Rev	Date	Change
B	2025-01-10	Skip lot added
C	2026-02-01	Safety parts excluded from skip lot
